

Course 10262A:

# Developing Windows Applications with Microsoft Visual Studio 2010

## Course Length:

5 days

## Overview

In this course, experienced developers who know the basics of Windows Forms development gain more advanced Windows Client design and development skills. WinForms and WPF programming models, as well as relative strengths and when to use each technology, are covered.

## Target Student

This course is intended for Technology Specialists in the area of Windows Client Development who work in a development environment that uses Microsoft Visual Studio .NET 2010 and Microsoft .NET Framework 4.0 to create rich client applications for Windows.

## Objectives

After completing this course, students will be able to:

- Understand how varying business requirements influence the design decisions when planning a Windows Client application.
- Understand the new features of Visual Studio 2010 WPF
- Design and build a UI that provides the expected end-user experience and UI functionality
- Create a consistent and manageable user interface
- Understand best practices when testing and learn how to debug their applications
- Use advanced exception handling in Windows Client application scenarios
- Implement advanced data binding scenarios
- Use coding techniques to improve the responsiveness of their applications
- Implement localization, user assistance, and accessibility features within an application

---

## Discover ITT, LLC

[www.discoveritt.com](http://www.discoveritt.com)

- Understand the basics of graphics in WPF
- Customize controls and introduce students to custom controls
- Implement application behaviors based on user actions or events by using attached properties and Expression Blend behaviors
- Develop data visualization within their applications in a manner that enables the application user to drill down into data visually
- Manage application state and settings throughout the application lifecycle
- Deploy their applications using the various methods supported by Visual Studio 2010

### **Prerequisites**

Before attending this course, students must have:

- An understanding of the problem-solving techniques that apply to software development, including the following principles of software development:
  - Modern software development models
  - Typical phases of a software development lifecycle
  - Concepts of event-driven programming
  - Concepts of object-oriented programming
  - Creating use-case diagrams
  - Designing and building a user interface
  - Developing a structured application
- A general understanding of the purpose, function, and features of following .NET Framework topics:
  - Common Language Runtime
  - .NET Framework class library
  - Common Type System
  - Component interoperation
  - Cross-Language Interoperability
  - Assemblies in the Common Language Runtime
  - Application Domains
  - Runtime hosts supported by the .NET Framework
- Experience using Visual Studio 2008 in the following task areas:
  - Declaring and initializing typed variables using the Camel case naming convention
  - Using arithmetic, relational, and logical operators in code statements
  - Using branching statements to control code execution
  - Using looping statements to iterate through collections or repeat steps until a specified condition is met
- Creating classes and methods to establish the basic structure of an application
- Using methods and events to implement the programming logic of an application
- Identifying syntax and logic errors
- Accessing and managing data from a data source

---

## **Discover ITT, LLC**

[www.discoveritt.com](http://www.discoveritt.com)

- Experience in object oriented design and development as follows:
- Creating and accessing classes and class properties
- Creating and accessing methods and overloaded methods
- Implementing inheritance, base classes, and abstract classes
- Declaring, raising, and handling events
- Responding to and throwing exceptions
- Implementing interfaces and polymorphism
- Implementing shared and static members
- Implementing generics
- Creating components and class libraries
- Experience in N-Tier application design and development as follows:
- Managing a software development process
- Controlling input at the user interface level in Windows Client applications
- Debugging, tracing, and profiling .NET applications
- Monitoring and logging .NET applications
- Implementing basic testing best practices
- Performing basic Data Access tasks with LINQ
- Basics of LINQ to XML
- Basics of LINQ to Entities
- Basics of LINQ to SQL
- Implementing basic security best practices in .NET Applications
- Basics of Code Access Security
- Basics of Role-Based Security
- Basics of Cryptography Services
- Implementing basic service calls
- Basics of consuming XML Web Services
- Basics of consuming WCF Services
- Using .NET Configuration Files
- Deploying .Net Framework Applications using ClickOnce and the MS Installer

### **Course Content**

#### **Module 1: Windows Client Application Design**

The goal of this module is to ensure that students understand how varying business requirements influence the design decisions when planning a Windows Client application. Students will learn how design requirements, specifications, and business goals affect the choice between WPF and Windows Forms when updating (or planning a new) Windows Client application.

#### **Lessons**

Windows Client Technologies

---

## **Discover ITT, LLC**

## Architectural Patterns

Interoperability between Windows Forms and WPF

Lab : Planning Windows Client Applications

Identify Windows Client Technologies

Choosing Design Patterns

Lab Application Guided Walk-Through

After completing this module, students will be able to:

Choose appropriate Windows client technologies

Choose appropriate architectural patterns

Identify areas for migration from WinForms

Identify areas for interoperability between WinForms and WPF

## Module 2: Introduction to Visual Studio 2010 and WPF Version 4

The goal of this module is to introduce students to the new features that Visual Studio 2010 and WPF version 4 provide

Lessons

What's New in Visual Studio 2010?

What's New in WPF Version 4

Lab : Guided Tour of Visual Studio 2010 and XAML

Guided tour of Visual Studio 2010

Guided tour of XAML Editor

After completing this module, students will be able to:

Use new features in Visual Studio 2010

Use new features in WPF version 4

## Module 3: Designing and Developing a User Interface

The goal of this module is to teach the student how to design and build a UI that provides the expected end-user experience and UI functionality, and retains that experience/functionality in various end-user environments, as well as when the application window resizes.

Lessons

Defining Page Layout

Using Content Controls

Using Item Controls

Sharing Logical Resources in a Window

Lab : Building a User Interface

Choosing User Interface Controls

Laying out the User Interface

Creating and Using Resource Dictionaries

After completing this module, students will be able to:

Define page layout

Use content controls

Use item controls

---

## Discover ITT, LLC

Hoover, Alabama 35244

(205) 989-4944 TEL

[www.discoveritt.com](http://www.discoveritt.com)

Share resources within a window or user control

#### Module 4: Taking Control of the User Interface

The goal of this module is to enable students to create a consistent and manageable user interface.

Lessons

Sharing Logical Resources in an Application

Creating Consistent User Interfaces by Using Styles

Changing the Appearance of Controls by Using Templates

Handling Events and Commands

Lab : Dynamically Controlling the User Interface

Creating Styles

Using Application Commands

Adding Routed Events

Creating a Custom Command

Migrating a Custom Command

After completing this module, students will be able to:

Share logical resources throughout an application

Create a consistent user interface by using styles

Change the appearance of controls by using templates

Handle events and commands

#### Module 5: Testing, Unit Testing, and Debugging

The goal of this module is to help students to develop good habits in regard to testing as well as enabling students to debug their applications. Students will also learn about advanced exception handling pertaining directly to Windows Client application scenarios

Lessons

WPF Testing Strategies

Debugging XAML

Providing User Feedback for Unhandled Exceptions

Understanding Security Features

Lab : Testing and Debugging WPF Applications

Unit Testing Strategy

Unit Testing WPF Applications

Debugging Applications in Visual Studio 2010

Advanced Exception Handling

After completing this module, students will be able to:

Implement a WPF unit test strategy

Debug XAML by using the WPF Visualizer and PresentationTraceSources

Provide user feedback for unhandled exceptions

Understand security features of an application

---

## Module 6: Simple Data Binding and Validation

The goal of this module is to teach the student how to implement simple data binding and data validation in order to manage data in a data source (CRUD). In addition to learning how to bind a value to a UI element, the student should learn best practices concerning when to use the various implementations of data binding and how to connect to a data source with LINQ.

### Lessons

Overview of Data Binding

Creating a Data Binding

Implementing Property Change Notification

Converting Data

Validating Data

Presenting Data at Design Time

Lab : Data Binding

Binding Controls

Implementing Value Converters

Validating Data

Implementing Property Change Notifications

After completing this module, students will be able to:

Explain WPF data binding concepts and terminology

Create a binding between a data source and a control

Implement property change notification

Convert data between the binding source and the binding target

Validate data entered by the user

Present data at design time

## Module 7: Data Binding to Collections

The goal of this module is to enable the student to implement more advanced data binding scenarios, picking up where the previous module on data binding left off. The student will learn how to bind to ListView, GridView, DataGrid, and other collection classes.

### Lessons

Binding to Collections of Objects

Using Collection Views

Creating Master-Detail User Interfaces

Using Data Templates

Presenting Design Time Data Collections

Lab : Data Binding to Collections

Binding to Collections of Data

Using Collection Views

Creating Master-Detail User Interfaces

Using Data Templates

After completing this module, students will be able to:

---

Hoover, Alabama 35244

(205) 989-4944 TEL

[www.discoveritt.com](http://www.discoveritt.com)

- Bind to a collection of objects
- Sort, filter, and group collections by using collection views
- Create master-detail user interfaces
- Customize data display by using data templates
- Present data collections at design time

#### Module 8: Enhancing UI Responsiveness

The goal of this module is to teach the students how coding techniques can be used to improve the responsiveness of their applications.

Lessons

- Implementing Asynchronous Processes
- Implementing Responsive User Interfaces
- Lab : Enhancing Application Performance
- Asynchronous Programming Strategy
- Asynchronous Programming
- Parallelizing Tasks

After completing this module, students will be able to:

- Implement asynchronous processes
- Implement responsive user interfaces

#### Module 9: Integrating Localization and User Assistance Features

The goal of this module is to teach students how to implement localization, user assistance, and accessibility features within an application.

Lessons

- Localization and Globalization
- Implementing User Assistance Features
- Providing User Accessibility Features
- Lab : Localizing a WPF Application
- Preparing for Localization for the LocBAML Approach
- Localizing Resources by Using LocBAML
- Preparing for Localization by Using Strongly Typed Resources
- Localizing Resources by Using Strongly Typed Resources
- Choosing a Localization Approach

After completing this module, students will be able to:

- Describe WPF localization and globalization features
- Implement localized WPF applications
- Implement user assistance features
- Provide user accessibility features

#### Module 10: WPF 2D Graphics, Multimedia, and Printing

The goal of this module is to teach the students the basics of graphics in WPF. The module will also provide an overview of multimedia (audio and video).

---

### Discover ITT, LLC

3 Riverchase Office Parkway – Suite 114

Hoover, Alabama 35244

(205) 989-4944 TEL

[www.discoveritt.com](http://www.discoveritt.com)

#### Lessons

Displaying 2D Graphics

Displaying Images

Adding Multimedia to WPF Applications

Creating and Printing Documents

Lab : Drawing 2-D Graphics

Identify the Appropriate Windows Client Technology

Creating the Data Access Layer and User Interface

Drawing Shapes, Painting with Brushes and Applying Effects

Adding Images

After completing this module, students will be able to:

Display 2D graphics

Add images in a WPF application

Add multimedia content to a WPF application

Create and print documents

#### Module 11: Control Customization

The goal of this module is to teach students how to customize controls and introduce students to custom controls.

##### Lessons

Overview of Control Authoring

Creating User Controls

Creating Custom Controls

Managing Control Appearance by Using Visual States

Integrating WPF and Windows Forms

Lab : Building a User Control

Identify the Approach Control Type

Creating a User Control in WPF

Adding a WPF Control to a Windows Forms Application

After completing this module, students will be able to:

Explain scenarios and options for creating new controls

Create user controls

Create custom controls

Integrate WPF and WinForms controls

#### Module 12: Attached Properties and Behaviors in WPF

The goal of this module is to teach the students how to implement application behaviors based on user actions or application events by using attached properties and Expression Blend behaviors.

##### Lessons

Implementing Attached Properties

Implementing Drag-and-Drop User Interfaces

---

## Discover ITT, LLC

Hoover, Alabama 35244

(205) 989-4944 TEL

[www.discoveritt.com](http://www.discoveritt.com)

Implementing Expression Blend Behaviors, Triggers and Actions

Lab : Implementing Drag-and-Drop Operations

Implementing Drag-and-Drop Operations

Implementing Expression Blend Behaviors

After completing this module, students will be able to:

Describe WPF attached properties

Implement drag and drop

Implement Expression Blend behaviors

Module 13: Animations in WPF

The goal of this module is to teach the student how to implement animations and to teach students how to develop data visualization within their applications in a manner that enables the application user to drill down into data visually. Students should also learn when animations should be used and why.

Lessons

Using Animations

Using Triggers

Implementing Data Visualizations

Lab : Creating Animations

Creating Animations Declaratively

Creating Animations Dynamically

Creating Routed Events

Handling Routed Events

After completing this module, students will be able to:

Explain when animations are appropriate for the user interface

Implement animation in WPF

Initiate animation by using triggers

Present data visualizations by using WPF

Module 14: Application State, Settings, and Lifecycle

The goal of this module is to teach students how to manage application state and settings throughout the application lifecycle.

Lessons

Creating Application Settings

Consuming Application Settings

Creating Custom Configuration Sections

Lab : Creating a Settings Dialog

Creating Application and User Setting by Using Visual Studio

Creating a Dialog Window

Reading and Writing Settings

Consuming Settings Properties

After completing this module, students will be able to:

---

**Discover ITT, LLC**

3 Riverchase Office Parkway – Suite 114

Hoover, Alabama 35244

(205) 989-4944 TEL

[www.discoveritt.com](http://www.discoveritt.com)

Persist user and application settings

Consume user settings

#### Module 15: Configure and Deploy Windows Client Applications

The goal of this module is to teach students how to deploy their applications using the various methods supported by Visual Studio 2010.

Lessons

Deployment Options

Deploying a Standalone WPF Application

Deploying an XBAP Application

Configuring Security Settings

Lab : Deploying Applications

Developing a Standalone Installer

Configuring a ClickOnce Deployment

Updating a ClickOnce Deployment

After completing this module, students will be able to:s

Explain deployment options

Deploy a standalone WPF application by using a Setup and Deployment project

Deploy a ClickOnce application

Configure security settings

---
